SUMMARY

Proficient full stack developer with a background in actuarial data analytics. Experienced working in the financial industry and other mission driven working environments with teams to produce dynamic, user-friendly web applications. Excited to combine my technical skills in web development with my background in data analytics to create thoughtful, customer-focused designs that drive company growth and innovation.

TECHNICAL SKILLS

Web Development: Express.js, React.js, Node.js, JavaScript ES5/ES6, Handlebars.js, JQuery, JSON, AJAX, HTML, CSS, DOM, Heroku, REST APIs, Bootstrap, Sequelize, Materialize, Postman

Databases: MongoDB, MySQL, FireBase

Miscellaneous: Windows, Git/Github, Google Suite, Microsoft Suite

PROJECTS

Shopalot | github.com/Calvinmac633/shopalot | shopalot-checkitout.herokuapp.com/

- Mobile application that makes shopping for family and friends easier. Create new, or join existing shopping lists that can be viewed and updated by other members who are given access.
- Responsible for setting up the back-end structure for users to add/remove things from their grocery list, and designed the front-end user interface.
- **Technologies Used:** React.js, MongoDB, Materialize-ui, and express routing.

Note Taker | github.com/Calvinmac633/note-taker | <http://sleepy-sands-76241.herokuapp.com/>

- A dynamic application that allows the user to create, update, and delete notes. Notes can be saved to be referenced later, even after closing the application.
- Responsible for the front-end logic of updating notes, as well as applying JSON to store user's notes.
- **Technologies Used:** JavaScript, RESTful APIs, JSON, Bootstrap, and express routing.

Password Generator | github.com/Calvinmac633/password-generator | calvinmac633.github.io/password-generator/

- A front-end application that uses Materialize-UI to professionally display a password generator. User selects different specifications and a new password is generated every time, and can be copied with the click of a button.
- Responsible for programming logic and display of the application.
- **Technologies Used:** JavaScript, jQuery, Materialize-UI, HTML, CSS.

Weather App | github.com/Calvinmac633/weather-app | calvinmac633.github.io/weather-app/

- A front-end application that builds upon a public weather API provided by openweathermap.org. Search by city to get current weather along with a 5-day forecast.
- Responsible for obtaining access to public API, and using front-end logic to display data based on conditional information.
- **Technologies Used:** JavaScript, RESTful APIs, Bootstrap, HTML, CSS.
